

Product Data

Castrol Rustilo[®] DWX 8

Description

Castrol Rustilo[®] DWX 8 is a light straw coloured volatile solvent containing specially blend surfactants functioning as a dewatering fluid / drying agent. It is used for the rapid removal of water residues from steel components.

Recommended Applications

- Drying of surfaces in which rapid removal of water is desirable.
- Drying of plated surfaces, optical lenses etc.
- Ideal for drying articles that cannot be subjected to heat and which will be subsequently painted or protected by some means other than the application of a temporary corrosion preventive.

Restriction

Castrol Rustilo[®] DWX 8 should not be used on copper and zinc materials as tarnishing may occur. It is designed exclusively for highly effective performance on steels.

Method Of Use

Castrol Rustilo[®] DWX 8 is best in dip applications. Some agitation and rotation should be given to immersed articles to be dewatered. Excessive agitation should be avoided to enable displaced water to separate quickly. Depending upon the process, it may be advantageous to skim the oil surface before removing dipped articles to avoid any possible re-deposition of water-droplets at the solvent / air interface.

Advantages

- Exceptionally long service life leads to customer cost savings.
- Improved compatibility with alkali agents reduces contamination effects from cleaner residues.
- Excellent water separation properties eliminate suspended droplets in the product.

Typical Characteristics

Castrol	Rustilo® DWX 8
Appearance	Light Straw Fluid
Density @ 15°C	0.78
Flash Point (Abel)	40°C minimum
Viscosity @ 40°C, cSt	1.00
